## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, 15, 21 and 22, drawn to female coupling half including a valve, lock shaft, lock piston and a plurality of detents residing in a plurality of apertures in the lock piston, classified in class 137, subclass 614.03.
- II. Claims 8-14, 16-18 and 23-26, drawn to female coupling half including a valve, an inner body and pressure relief means for venting the coupling half, classified in class 137, subclass 614.
- III. Claims 19 and 20, drawn to a female coupling half including a valve, a retainer for securing a seal, the female valve including a lip and a recess, classified in class 137, subclass 614. 05.

Inventions of Groups I-III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group II has separate utility such as venting a gas line. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for one Group is not required for the other Groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
